PCIE Wifi Card detected but can't connect. 2019/09/03

I bought a new GPU that blocks a PCIE slot on my motherboard. The wifi card that I put into the block slot worked fine until I moved it to the other PCIE. It is detected in device manager and shows all of the different routers I can connect to, but it says I can't connect. It shows the small sun icon and darkened gray bars. I switched it back to the original slot and it worked fine, but I can't fit my GPU if I put it in. I've done a bit of research and people are suggesting risers, but I doubt it will fit under the GPU. Also tried updating BIOS but didn't work. Why doesn't my wifi card work in the second PCIE slot? How can I fix it?Wifi card:
